### Office Action Summary

**Application No.**

10/630,348

**Applicant(s)**

VAYA ET AL.

**Examiner**

MELISSA S. MERCIER

**Art Unit**

1615

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 06 February 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1,2,4,5,9-13,16-20,22-35,39-43 and 46-51 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,2,4,5,9-13,16-20,22-35,39-43 and 46-51 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-849)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_

- 6) ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Summary***

Receipt of Applicants Remarks and Amended Claims filed on February 6, 2009 is acknowledged. Claims 1-2, 4-5, 9-13, 16-20, 22-35, 39-43, and 46-61 are pending in this application.

### ***Withdrawn Rejections***

#### ***Claim Rejections - 35 USC § 112***

The rejection of claims 1-5, 9-13, 16-35, 39-43, and 46-51 under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention regarding the solubility of the active agent has been withdrawn in view of Applicants amendment to the specification incorporating the definition of high solubility from the specification on page 8, lines 17-20.

The rejection of claim 21, as being indefinite for the terminology "the high solubility active ingredient is potent" has been withdrawn in view of Applicants cancellation of claim 21.

The rejection of claim 25 for the broad recitation can be given twice a day or more, and the claim also recites preferably can be given once a day which is the narrower statement of the range/limitation has been withdrawn in view of Applicants amendment to claim 25 to recite twice a day administration and the addition of new claim 61 to recite once a day administration.

The rejection of claim 28 for the use of a Trademark as a claim limitation has been withdrawn in view of Applicants deletion of said trademark from the claim.

***Maintained Rejections***

***Claim Rejections - 35 USC § 112***

Claims 1-2, 4-5, 9-13, 16-20, 22-35, 39-43, 46-61 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what Applicant copolymers would be encompassed by ammonio methacrylate copolymers type A and B USP and methacrylic acid copolymer type A, B, and C, USP, polyacrylate dispersion 30% Ph.Eur. The claims must be presented to define the invention within the metes and bounds of the specification. The citation to outside sources is outside the specification.

***Response to Arguments***

Applicant's arguments have been fully considered but they are not persuasive. Applicant argues that since the USP is a recognized compendium of standards it does not raise the issue of indefiniteness. The Examiner respectfully disagrees. As stated by Applicant in their remarks, it is recognized that the USP can change its standards therefore, there making the particular component indefinite since it can be changed over time.

***Claim Rejections - 35 USC § 103***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-2, 4-5, 9-13, 16-20, 22-35, 39-43, 46-61 are rejected under 35 U.S.C. 103(a) as being unpatentable over Timmins et al. (US Patent 6,600,300).

Timmins discloses a controlled release delivery system for pharmaceuticals which have high water solubility, such as antidiabetic metformin HCl salt. The delivery system includes (1) an inner solid particulate phase formed of substantially uniform granules containing a pharmaceutical having a high water solubility, and one or more hydrophilic polymers, one or more hydrophobic polymers and/or one or more hydrophobic materials such as one or more waxes, fatty alcohols and/or fatty acid esters, and (2) an outer solid continuous phase in which the above granules of inner solid particulate phase are embedded and dispersed throughout, the outer solid continuous phase including one or more hydrophobic polymers, one or more hydrophobic polymers and/or one or more hydrophobic materials such as one or more waxes, fatty alcohols and/or fatty acid esters, which may be compressed into tablets (abstract). Timmins discloses high water solubility to be solubility in water at ambient temperature of at least about 50mg/mL water (column 9, lines 40-46).

The inner solid particulate phase may comprise 10-98% drug (column 9, lines 59-61). The extended release material in the form of hydrophobic polymers and/or other hydrophobic materials is in the range of about 5-95% by weight, based on the weight of the inner solid particulate phase (column 9, lines 62-67), which reads on the claimed

weight ratio of drug: polymer particles of 100:2.5 to 100:30 as recited in the instant claims.

The inner solid particulate phase is in a weight ratio to the outer solid continuous phase is within the range of 0.5:1 to 4:1 (column 9, lines 54-58), which reads on the claimed weight ratio of particles: coating of 100:2.5 to 100:30 as recited in the instant claims.

Regarding claims 4-5, 11, 33-35, 41 hydrophobic polymers which may be employed in the inner solid particulate phase and/or outer solid continuous phase include, but are not limited to ethyl cellulose, hydroxyethylcellulose, ammonio methacrylate copolymer, methacrylic acid copolymers, methacrylic acid-acrylic acid ethyl ester copolymer, methacrylic acid esters neutral copolymer, dimethylaminoethylmethacrylate-methacrylic acid esters copolymer, vinyl methyl ether/maleic anhydride copolymers, their salts and esters (column 10, lines 44-55).

Regarding claims 10, 25, 40, 49-50, and 61 highly water soluble drugs, such as metformin, will be employed in a dosage range of 150-3000mg on a regimen in single daily doses or 2-4 divided daily doses, 1-4 times a day (column 20, lines 21-28).

Regarding claims 12-13 and 42-43, other hydrophobic materials which may be employed in the inner solid particulate phase and/or outer solid continuous phase include, but are not limited to waxes such as beeswax, carnauba wax, microcrystalline wax, and ozokerite; fatty alcohols such as cetostearyl alcohol, stearyl alcohol; cetyl alcohol and myristyl alcohol; and fatty acid esters such as glyceryl monostearate, glycerol monooleate, acetylated monoglycerides, tristearin, tripalmitin, cetyl esters wax,

glyceryl palmitostearate, glyceryl behenate, and hydrogenated castor oil (column 10, lines 56-65).

Regarding claim 19 and 48, Applicants attention is drawn to the table on the top of column 21 and Examples 1-4, which discloses 28-39% released at 1 hour, and between 75.7 through 93.1 at 6hrs (columns 21-23: Examples 1-4).

Since the prior art discloses the same composition as the instant claims, it is the position of the examiner that it would possess the same functional properties at the instant claims, with regard to plasma concentrations.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have optimized the ratio of particles to coating in order to alter the drug release profile. Timmins discloses, in a controlled release dosage form, the formulator tries to reduce the rate of dissolution by, for example, embedding the drug in a polymeric matrix or surrounding it with a polymeric barrier membrane through which drug must diffuse to be released for absorption. To reduce the rate of release of drug from the dosage form to an appropriate level consistent with the blood level profile desired for a drug possessing very high water solubility, very large amounts of polymer would be required for the matrix or barrier membrane. If the total daily dose of drug to be delivered is of the order of only a few milligrams this may be feasible, but many drugs having the solubility properties described require total daily doses of the order of many hundreds of milligrams. Whilst it is possible to create oral controlled release dosage forms for such products by use of large amounts of polymer, an unacceptably large dosage form may result (column 2, lines 16-33).

Applicant is reminded that where the general conditions of the claims are met, burden is shifted to applicant to provide a patentable distinction. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. See *In re Aller*, 220 F.2d 454 105 USPQ 233,235 (CCPA 1955). The optimization of the polymer coating would be a rate limiting/controlling variable.

Claims 24, 27-28, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Timmins et al. (US Patent 6,600,300) in view of Merck Index citations for niacin, sodium valproate, and nicotine.

The teachings of Timmins is disclosed above and applied in the same manner.

Timmins does not particularly disclose the use of niacin, sodium valproate, or one of the compounds disclosed in instant claim 24.

The Merck Index provides the following solubility's:

Niacin: One gram dissolves in 60 ml water.

Sodium valproate: One gram is sol in 0.4 ml water

Nicotine: Very sol in water.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have substituted any highly soluble drug into the formulation of Timmins since Timmins discloses that any highly soluble drug is usable. One of ordinary skill would have the expectation of success since Timmins discloses numerous others highly water soluble drugs as well.

***Response to Arguments***

Applicant's arguments have been fully considered but they are not persuasive.

Applicant argues:

**\*the formulation of Timmins requires the use of hydrophilic polymers whereas the instant application only uses hydrophobic polymers.**

While it is acknowledged that Timmins uses hydrophilic polymers in his inner solid particulate phase, it is also noted that Applicant has used comprising terminology allowing for the inclusion of any additional components into the formulation regardless of their material effect on the composition.

**\*the final weight of the tablets of Timmins would be much larger than those of the instant claims.**

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., final size of the tablet/dosage size) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

**\*Timmins does not disclose a "dual retard technique".**

While it is acknowledged that Timmins does not use the claimed terminology, his final tablet formulation is with the scope of the instantly claimed tablet formulation. Applicant is as much acknowledges overlapping ranges of the polymer to active agents, and the use of identical matrix formulations. Therefore, it is the position of the Examiner

that the instantly claimed tablets are obvious based on the teachings of Timmins. The fact that Timmins does not exemplify each and every possible embodiment within the claimed ratios does not negate the fact that he discloses them as suitable for use.

The rejections are therefore maintained for the reasons of record.

***Newly Applied Rejections/Objections***

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-2, 4-5, 9-13, 16-20, 22-35, 39-43, and 46-61 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant has amended the claims to recite the ratios in the instant claims are by weight, however, there is no written basis for such an amendment within the specification. Applicant has argued that one of ordinary skill would understand that the ratios are weight ratios; however, Applicant has not provided any factual evidence that the skilled artisan would immediately recognize the ratios to be weight ratios, and not that of volume or parts. If Applicant believes that written support for the amendment is

present in the instant application, they are invited to clearly and distinctly point out the precise passage of such support. **This is a new matter rejection.**

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MELISSA S. MERCIER whose telephone number is (571)272-9039. The examiner can normally be reached on 8:00am-4:30pm Mon through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward can be reached on (571) 272-8373. The fax phone

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
